SOUTH AUSTRALIA.

STATISTICAL REGISTER.

1940-41.

Compiled from Official Records.

By A. W. BOWDEN, A.I.A.,
Government Statist, &c.

By Authority: K. M. STEVENSON, Government Printer, Adelaide.

1942.

Statistical Register of South Australia, 1940-41.

PREFACE.

The Statistical Register is divided into five parts as follow:—

Part I.—Social—Administration, Justice, Education, Hospitals, Charities, etc.
II.—Population and Vital
III.—Finance—State, Local Government, Banking, etc.
IV.—Trade, Transport and Communication. (Not available for publication during war)
V.—Production

The Statistical Summary of South Australia for the years 1836 to date inclusive has not been attached to this volume.

Since in most cases considerations of space do not permit of a verbal analysis of the figures, it has been necessary in certain tables to append explanatory notes at the bottom of the page. Careful attention is drawn to these notes since they will generally be of considerable assistance in interpreting the published figures.

My thanks are tendered to the various heads of State and Commonwealth Departments for their co-operation in furnishing statistical data, often at considerable inconvenience.

I desire also to express my appreciation of the services of Mr. H. L. Semmens, Assistant Government Statist, and of the staff of compilers and other officers for their careful attention to intricate details in the compilation of the various sections of this volume.

1st September, 1942. A. W. BOWDEN, Government Statist, etc.

There was a loss of 4,681 (525) or 0·78 (0·09) per cent. by migration, a gain of 460 with oversea countries and a loss of 5,141 with other States, thus decreasing the gain of 4,309 by natural increase to a net loss of 372 (gain 3,354) for the year, equal to 0·06 (gain 0·56) per cent.

Migration—For the year 1940 27,168 (32,171) persons arrived in the State, and 31,849 (32,696) departed, loss 4,681 (525). Building Operations.—(*a*) Number—In the metropolitan area permits for the erection of 1,714 (1,537) dwelling-houses were issued, an increase of 177. The greatest number recorded was 3,543 in 1926, from when the number fell to only 45 in 1931, increasing again to 1,714 for 1940. (*b*) Values—The estimated total value of all new buildings, including alterations, was £2,621,744 (£2,546,141), increase £75,603. The values had previously fallen from £4,408,433 in 1926 to £323,224 in 1931.

CENSUS, 30TH JUNE, 1933.

During the intercensal period, the population is estimated annually from records of births and deaths and migration returns. On the results of the 1933 census being known, the estimates were adjusted accordingly for each year since the previous census (1921) which will account for any differences in the figures now appearing and those published during the intercensal period.

The population of the State as a result of the census on 30th June, 1933, was 580,949, an increase in 12¼ years of 85,789 (17·33 per cent.).

For the metropolitan area the population was 312,758 (53·83 per cent. of the total).

Dwelling-Houses.—The census of 1933 recorded 139,991 (107,914 in 1921) occupied dwelling houses inclusive of tenements, in the State, with inmates averaging 4·15 (4·56) per dwelling. The inmates averaged 4·82 in 1911, 5·16 in 1901, and 5·28 in 1891. There were 5,353 (4,431) unoccupied dwelling-houses and 160 (674) being built.

VITAL STATISTICS, YEAR 1940.

BIRTHS.

Numbers for State.—In 1940 the births registered numbered 10,017 (9,618), an increase of 399. The number had fallen steadily from 11,492 in 1927 to 8,270 in 1935, since when the numbers have increased each year, the 1940 total showing an increase of 1,747 over 1935, but still about 1,600 below the annual average of the years 1910-29, despite the increase in marriages and population.

Numbers Metropolitan Area and Country.—The births for the city and suburbs for 1940 numbered 4,830, and for country districts 5,187, the respective rates per 1,000 mean population being 15·00 and 18·92. NOTE.—Births are classified according to the usual residence of the mother.

Multiple Births.—Twin births numbered 75 (87) sets:—males 73 (89) and females 77 (85) and triplets 1 (2) sets:—males 3 (5) and females — (1). In 1919 there was one quadruplet birth of four males, and for the ten years 1931 to 1940, nine triplet births and 802 twin births. In 1882, there was one quintuplet birth (one male, four females) of whom four died in five minutes and one in two days.

Sexes.—Males numbered 5,145 (4,987) and females 4,872 (4,631). The males always exceed the number of females born, the average number of males born to every 100 females for 1940 being 105·60 (107·69).

Ex-Nuptial Births.—276 (273) were registered during the year. The percentage on total births registered was 2·76 (2·84). The percentage of ex-nuptial births in this State for many years has been much lower than that of any of the States or New Zealand, and the 1940 rate was the lowest since 1890.

Legitimations.—46 (28) were legitimated under the Act during the year.

Still-Births.—In this State the law has only provided for the compulsory registration of still-births from May, 1937, 163 being registered for May-December 1937, 285 for 1938, 268 for 1939, and 268 for 1940.

Adoptions.—The Adoption of Children Act was brought into operation in 1926. The following are the numbers adopted in recent years:—1936, 99; 1937, 122; 1938, 102; 1939, 150; 1940, 168.

Natural Increase.—The annual natural increase—excess of births over deaths—for the five years 1935-1939 was ·61 percentage of the population. For the five years (1925-1929) it was 1·12 per cent., and for the pre-war period (1910-1914) it was 1·77 per cent. For the year 1940 it was 0·72 (0·65) per cent.

Crude Birth Rates.—The birth rate per 1,000 of mean population for 1940 was 16·80 (16·13). From 1920 to 1932 the rate fell continuously from 24·72 to 14·74, after which it was irregular. The lowest recorded was 14·14 in 1935, but each year since has shown an increase, with 16·80 in 1940. For the five years' period 1910-1914 the annual birth rate averaged 27·98 per 1,000 of mean population; for 1915-19, 25·51; 1920-24, 23·43; 1925-29, 20·16; 1930-34, 15·54, and 1935-39, 15·32. The average rate for the five years' period 1935-39 represented a fall of 12·66 over the period 1910-1914.

Birth Rates in Australasia.—The following statement shows the birth rate per 1,000 of the population in each of the Australian States and in New Zealand for the last five years:—

Year.	New South Wales.	Victoria.	Queensland.	South Australia.	Western Australia.	Tasmania.	Australia.	New Zealand.
1936	17·31	15·63	19·17	15·17	18·86	19·84	17·13	16·64
1937	17·63	16·02	19·36	15·25	18·95	20·69	17·43	17·29
1938	17·39	16·25	18·98	15·88	19·87	20·82	17·46	17·93
1939	17·46	16·20	20·08	16·13	19·43	21·03	17·65	18·73
1940	17·81	16·86	20·02	16·80	19·60	20·90	18·02	21·19

The birth rate in England and Wales was 15·1 (14·9) in 1938.

Since the crude birth rate is calculated with reference to the total mean population, it is obvious that it will be affected by any marked change in the age and sex distribution of the population over a period of years. Therefore, although such a rate gives a fairly reliable measure over a small period of time, it would not reveal the true position when comparison is made over a long period.

A more accurate comparison may be made by means of a birth rate per 1,000 women at the principal child-bearing ages. This rate refers all births (nuptial and ex-nuptial) to all women at the given ages (married and single). It would be still more accurate to have two rates (*a*) nuptial rate, (*b*) ex-nuptial rate, but space does not permit of a more detailed analysis. The table cannot be continued from 1935 until particulars of ages at the next census become available.

MARRIAGES.

Number of Marriages.—6,950 (5,670) marriages were registered for the year 1940, an increase of 1,280 on the record of the previous year, The pre-depression record for a normal year was 4,503 in 1926, falling to 3,069 in the depression year 1930. Since then the number has increased each year and since 1935 there has been a succession of records. During the 1914-18 war there was a decrease of marriages, but on this occasion an abnormal increase. The rate per 1,000 mean population was 11·66 (9·51).

Officiating Ministers.—At the close of the year there were 734 Ministers of Religion and 30 Registrars enrolled with power to celebrate marriages. The Act provides that when a marriage is celebrated by a minister, he must send within seven days, one certificate to the District Registrar and one certificate with licence, etc., to the Principal Registrar, and at the end of each quarter a statement of all the marriages celebrated by him during such period.

Of the total marriages for the year, Methodist Ministers celebrated 2,112, or 30·4 per cent. ; Church of England, 1,795 or 25·8 per cent. ; Roman Catholic, 794 or 11·4 per cent. ; the Registrars celebrated 608, or 8·8 per cent.

The following table gives further particulars :—

Marriage Rates per 1,000 *of Mean Population.*—The annual rates per 1,000 of mean population for quinquennial periods from 1900-1939 and the years 1937 to 1940 were as follow:—

Period.	Rates.	Period.	Rates.	Period.	Rates.
1900-1904	6·59	1920-1924	8·55	1937.....	9·06

1915-1919	7·94	1935-1939	8·99	1940.....	11·66

The marriage rate for 1940, 11·66, is the highest rate on record, From 1920, the annual rate had fallen to a record low rate in 1931 (depression year) with annual increases from then to 1940. This is reflected in the annual means for quinquennial periods.

The net natural increase fell from an annual mean of 14·06 per 1,000 of population for the years 1900-1904 to 6·12 for the years 1935-1939, a decrease of 7·92.

Death Rate of Sexes.—The annual mean crude death rates for the period 1900-1904 was 12·04 per 1,000 of population for males and 9·94 for females, and for the period 1935-1939, 9·92 for males and 8·48 for females. The death rate of males is thus seen to be much higher than for females and to have fallen since the period 1900-1904 by 2·12 and females by 1·46 per 1,000 of population, equal to 17·6 per cent. for males and 14·7 per cent. for females.

The death rate in England and Wales was 11·6 (12·4) in 1938.

Index of Mortality.—Over a long period of years, the crude death rate is open to objection when used as a measure of the vitality or mortality of the population. Mortality can properly be examined only with reference to the age and sex distribution of the population.

The expedient is often used of substituting for the crude death rate a " standardized death rate " or " index of mortality." Such a rate is shown in the following table, in which the differences in the age and and sex constitutions of the populations of the six States have been taken into account in computing their respective indexes of mortality. The results for each are based upon a standard population, distributed according to sex, into eleven age-groups. This table may be taken as a fairly reliable measure of the relative total mortality of different States during the period 1921 to 1939. However, being based on the age constitution as at the 1933 census, the latter years are probably overstated owing to the continuing ageing of the population. It will be noticed that South Australia has the lowest index for the Commonwealth.

Cremations during the years 1937-38 to 1939-40 have numbered as follow :—75, 112, 109.

Deaths in Age-Groups.—356 (336), or 6·24 (5·85) per cent. of the total deaths occurred within the first year of life, and 462 (428), or 8·09 (7·45) per cent. within five years of life, 644 (600), or 11·28 (10·45) per cent. of the total were under 20 years of age, and 2,539 (2,628), or 44·48 (45·79) per cent. were 70 years and over. Causes of Death.—The Statistical Classification of the Causes of Death adopted is in accordance with the International List of Causes of Death as revised in 1938. Previous to 1940, the 1929 revision had been used.

The number of deaths, male and female, from each of the causes set forth in such list, and the age-groups decided upon by the Conference of Statisticians and Health Authorities in 1928, have been classified and may be found in Tables Nos. 28 and 30 of this Section of the Statistical Register. The principal causes only can be referred to in this report, and are set forth in the following table. The percentage of each to the total deaths and the rates of each per 10,000 of mean population are also shown.

Diseases of the Heart.—From the foregoing it is noted that diseases of the heart, account for the greatest number of deaths, though the rate per 10,000 of mean population from 1910 to 1930 varied but little except during the war period when it increased. In quinquennial periods the average annual rates per 10,000 of population were :—1910-14, 11·11 ; rising in the war period 1915-19 to 12·16 ; 1920-24, 10·69, 1925-29, 10·53 ; 1930-34, 13·94 ; 1935-39, 19·27. Some of the substantial increase since 1930, and decreases under senility and ill-defined diseases, are the result of the movement initiated for more definite medical certificates, the better classification having proved the 1930 and previous figures to have been understated.

For the year 1940 the deaths totalled 1,345 (1,316), increase 29, the number being equal to 23·56 (22·93) per cent. of the total deaths and 22·56 (22·08) per 10,000 of the mean population.

Cancer and Tuberculosis.—Except for irregular movements since 1930, the death rate for tuberculosis has been showing a heavy continuous fall, the rate for 1940 being less than half the rate 20 years ago. Cancer had been showing a fairly continuous rise, but during the last few years the rate has been fluctuating. The increase in latter years is not so serious as it would appear from the crude death rate, for most cancer deaths are of older persons, and these now constitute a much greater proportion of the population. See also remarks below *re* cancer.

The following are the comparative particulars for the years 1910 to 1940 :—

From the foregoing table it is noted that the deaths per 10,000 of population from tuberculosis averaged annually 8·65 for the period 1910-1914, and those for cancer 7·94, or ·71 less than tuberculosis, whilst the annual averages for the last five years, 1935-1939, were—Tuberculosis, 4·05 and cancer 12·03, the rate for cancer being 7·98 above tuberculosis for the latter period, whilst for the year 1940 the average per 10,000 of population from tuberculosis was only 3·69 (3·78) and from cancer 12·51 (11·83).

It is rather a remarkable fact that the death rates from tuberculosis and cancer combined remain very constant, usually about 16·5, with a slight downward tendency.

Tuberculosis of the Respiratory System.—Out of the total deaths from tuberculosis of all kinds 220 (225) for the year 1940, tuberculosis of the respiratory system caused 188 (206) deaths, or 85 (92) per cent. The rates for the two years were ; 1939, 3·46, 1940, 3·15 ; a considerable fall on previous years. For the period 1910-1914 it was 7·18, or greater by 3·60 per 10,000 of population than in the period 1935-1939.

Cancer—Seat of Disease.—Cancer of the stomach and duodenum 154, 85 males and 69 females, intestines 108, breast 83, male genital organs 39, rectum 48, and uterus 46, are the chief seats of the disease. Total cases 746 (705). Further details are shown in Return No. 25.

Notes re *Increased Deaths.*—Although the deaths from cancer as shown in crude numbers and rates have increased rapidly during the last 20 years, the position is not so serious as it at first appears. The age constitution of the people has a marked effect, due to the fact that most cancer deaths are of older persons. The lower birth rate and the increased longevity of the people have had such an effect that whereas the number of persons under 40 years of age had only increased by 27 per cent. between the 1911 Census and the 1933 Census, those 40 years of age and over had increased by 88 per cent. and those 60 years and over by 112 per cent. The crude cancer death rate between 1911 and 1933 had increased 59 per cent., but for persons under 40 years of age it had decreased 21 per cent. ; for persons 40 years of age and over it had only increased 25·5 per cent. and for those 60 years and over only 21·5 per cent.

Further it is almost certain that more accurate diagnosis by the medical profession has resulted in an increased number of deaths being classed to cancer. The rate of deaths of persons 60 years of age and over from senility has decreased by 73 per cent. and from ill-defined causes by 81 per cent. from 1911 to 1933, and probably a number of deaths that would have been merely classed as senility or which were ill-defined previously are now classed to some definite disease, such as cancer.

Tuberculosis, Cancer, Heart Diseases and Nephritis.

It has previously been pointed out that the crude death rate is not an accurate measure of mortality, which can be properly examined only with reference to its incidence at individual ages. This is even more important when comparing the effect of different diseases, which fact may be illustrated by the table hereunder showing the average mortality over the three years 1932-1934 per 10,000 of population at decennial age groups. No attempt has here been made at statistical refinement, but the table may be taken as giving an approximate measure of the relative incidence of mortality from the causes specified at various ages. The table may serve to illustrate the heavy mortality from Tuberculosis at ages under 50, the heavy rate for females at ages 20-29 being outstanding.

Since mortality decreases rapidly during the first five years of life, the death rate from tuberculosis has been prepared for age-groups 0-4 and 5-9. Too much reliance cannot, however, be placed in the death rate at group 0-4, since here the group rate is an average of a rapidly changing mortality. The same criticism applies throughout, but the effect is significant only at the extreme ages.

Pneumonia (*including Broncho-pneumonia*).—Total deaths 319 (273). The annual rate for the period 1910-14 was 5·15, increasing to 6·49 for 1925-29 and falling again to 5·46 for 1935-39. The rate for 1940 was 5·35 (4·58). Broncho-pneumonia deaths were 185 (168) and Lobar, 123 (94).

Bronchitis, Acute, Chronic, and Unspecified.—Total deaths 77 (64), rate 1·29 (1·07). Bronchitis averaged annually the five years 1935-1939, 1·12 per 10,000 population, and 2·93 for the years 1910-1914, a decrease of 1·81 per 10,000 of population.

Other Respiratory Diseases.—Excluding the deaths from pneumonia 319 (273) ; and bronchitis 77 (64), the total deaths from other respiratory diseases numbered 132 (137), the principal causes being—pleurisy, 25 (16) ; congestion and haemorrhage of lungs, 62 (97) ; asthma, 13 (9).

Parasitic and Infectious Diseases.—These classes of disease were responsible for 381 (368) deaths, which includes the 220 (225) deaths from tuberculosis already reviewed. The remaining chief causes were :—Typhoid fever, 5 (—) ; whooping cough, 17 (16) ; diphtheria, 23 (30) ; influenza, 9 (24) ; dysentery, — (3) ; syphilis, 41 (17), not comparable ; tetanus, 7 (7) ; acute poliomyelitis, 4 (4).

Notifiable Infectious Diseases.—Certain proclaimed infectious diseases are notifiable under the Health Act to the Central Board of Health. A total of 14,338 (11,031) cases were reported during the year.

The principal diseases were diphtheria, 603 (643) ; typhoid fever, 20 (16) ; erysipelas, 102 (96) ; measles, 11,082 (6,151) ; puerperal fever, 84 (50) ; pulmonary tuberculosis (phthisis), 276 (334) ; scarlatina and scarlet fever, 210 (525) ; whooping cough, 1,836 (2,931) ; influenza, 58 (246), poliomyelitis anterior acuta 63 (4).

Cerebral Haemorrhage, Embolism and Softening (*including combined with Arterio-sclerosis*).—Total, 587 (552). The annual rate per 10,000 of population for the five years, 1935-39, was 8·90. For the period 1910-14 it was 4·75, and the increase has been practically continuous. For 1940 it was 9·85 (9·26).

Diabetes Mellitus.—130 (144). Males 55 (54), females 75 (90). Of the total 121 (130) were 50 years of age and over.

Puerperal Diseases, Accidents of Pregnancy and Confinement.—Total 33 (39). Of this number 3 (7) were recorded as due to puerperal infection, and 10 (6) to abortion with septic conditions. There were 8 (4) criminal abortion. The rate is equal to 3·29 (4·05) per 1,000 live births. Excluding criminal abortion the rate was 2·49 (3·84).

External Causes.—Total 387 (434). The principal causes were—Suicides, (61) 65, equal to a rate of 1·1 (1·1) per 10,000 of population ; accidental drowning 31 (35) ; automobile accidents, 109 (99) ; traumatism by falls, 82 (53) ; homicides, 4 (1), excessive heat 5 (76).

Infantile Mortality.

There were 356 (336) deaths of infants under one year of age, an increase of 20. The death rate for 1938 of 30·50 is believed to have been the lowest for any country in the world, and even the higher rate of 35·54 for 1940 is the lowest except for New Zealand and Queensland. For many years South Australia, in common with the other States of the Commonwealth and New Zealand, has had a very low mortality rate for infants under one year of age compared with other countries. But even so the economic loss to the State is considerable, for in the last 10 years, 3,071 infants died before reaching the age of one year and, in addition, 1,036 before reaching five years of age, making a total loss of 4,107 under five years of age. In other words, the State has lost by death during the last 10 years approximately one baby in every 28 born before reaching the age of one year with an additional loss before the age of five is reached. Further, there is the loss of still-born children, nearly 300 annually. (See paragraph *re* still-births, page 4.)

Infantile Mortality in Australasia.—The following statement shows the infantile death rate per 1,000 births in each of the Australian States and in New Zealand, for the last five years.

1935-1939	297	32·85	1940	356	35·54

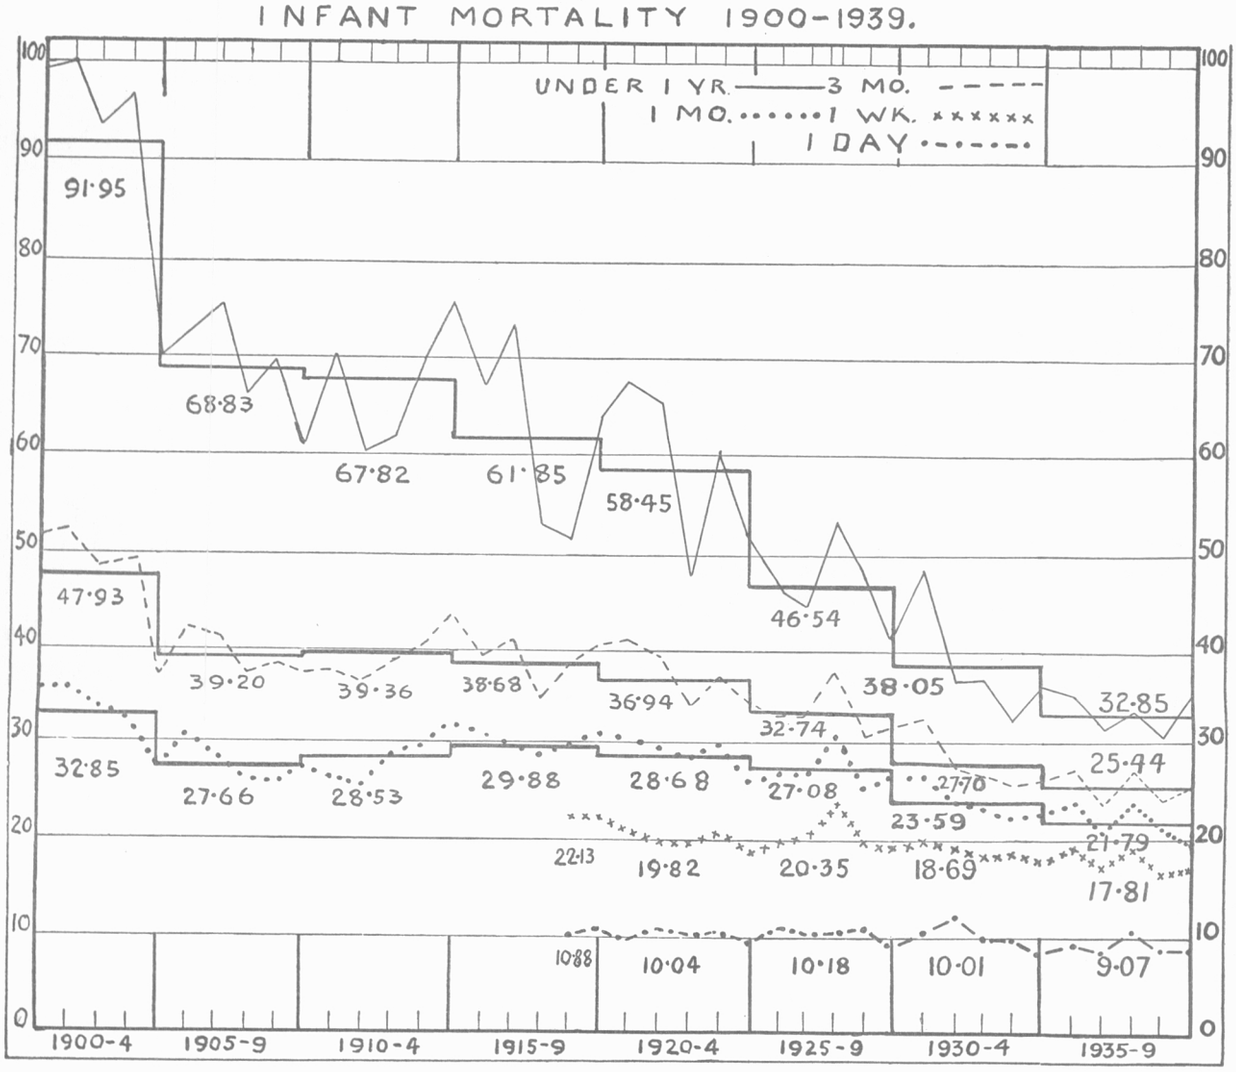

The annual mean death rate of infants under one year of age for the five years 1895-1899 was 110·25 and for the five years, 1935-1939, only 32·85. Fall of 77·40 per 1,000 live births is certainly very gratifying. The 1939 rate was only about half the rate 20 years ago, and one-third of the rate around 1900. There is also a decided fall in the deaths of children over 1 year of age.

Still there are points revealed by an analysis of the facts which are not satisfactory. I refer to the record of deaths under one month of age. Most of the improvement has taken place in the rates for ages above one month and under 12 months. In the tabulated summary and in the graphs the rates for deaths of infants under one month, under one week, and under one day of age are shown separately, and these show less progress.

Under one month for the period 1900-1904 the mean rate was 32·85, and 1935-39, 21·79, a fall of only 11·06, whilst for the ages one month and under 12 the rates for the same period were 59·10 and 11·06, a fall of 48·04. Further, during the last period, of the total number (985) dying within one month of life 804 or 82 per cent., died before reaching the age of one week, and 408 or 41 per cent. of the 985 were less than one day old. The great majority of those dying under one month of age died from pre-natal causes.

The annual mean number and annual mean rates per 1,000 births of infants dying within the following ages were as follow :—

Explanation of Graph.—The bases of the small rectangles represent the years, and the annual means for the quinquennial periods are also shown. The figures to right and left represent the rate per 1,000 live births.

Pre-natal, Etc., Causes of Death.—Code Nos. 157—161. During the five years, 1935-39, deaths from malformations, congenital debility, premature births, and other diseases of early infancy accounted for 1,004 deaths, or 68 per cent. of the total dying within one year of age compared with 43 per cent. for the period 1910-14. Nearly all of these deaths occurred within one month of birth. Deaths from diarrhoeal diseases for 1935-39 were 82, or 5 per cent. compared with 26 per cent. for 1910-14, and other diseases 400, or 27 per cent. compared with 31 per cent.

The average percentage of loss from pre-natal, etc., causes is greater for the period 1935-39 than for the previous four quinquenniums. These facts indicate the direction in which efforts for the saving of infant life should be directed.

Sexes.—The number of boys dying before reaching one year of age for the last five years numbered 832, and girls 654, the deaths of boys being 26 per cent. greater. For 1940—Of the total deaths 356 (336) —214 (198) were males and 142 (138) were females.

Care of Infant Life.—The Mothers' and Babies' Health Association, has 66 branches in the State ; 44 of which are in the metropolitan area. In addition, the Railway Travelling Clinic calls at 31 country towns every two months, on Eyre Peninsula a Nurse calls at 10 towns every six weeks and at four towns on Yorke Peninsula every fortnight. The Government makes an annual grant of £3,000 to the Association. During the year ended 31st July, 1940, the nurses paid 1,313 visits to expectant mothers and 24,729 to young babies. Baby clinics are also established in the State, and during 1939-40, 123,009 examinations of babies brought by mothers were made and advice given when necessary.

ANATOMY ACT, 1884.

The Inspector of the School of Anatomy reported, under Clause 6, that 17 (13) bodies had been removed to the University School of Anatomy for anatomical examination.

NOTE.—In compiling the above tables, the mean rainfall in each agricultural county has been first obtained from all available records within or on the borders of the county, and then weighted by the area of the county to obtain the mean rainfall for each Division and the State. Counties Hamley and Young (Murray Mallee), Derby, Lytton, and Taunton (Upper North), and Manchester, Hore-Ruthven, and York (Western) being non-agricultural counties, are excluded in compiling the average rainfall for this return.

(*a*) Gross value is defined as the value placed on recorded production at the wholesale price realised in the principal markets. Where primary products are absorbed at a local point or become raw material for a secondary industry, the value in each case is presumed to be the value at the principal market. Values include Bounties. (*b*) Marketing Costs.—Freight, commission, containers, insurance, etc. (*c*) Local value is gross value less marketing costs, being value at place of production. (*d*) Production costs such as stock feed, petrol, oil, seed costs, seed pickling, manures, spraying, dips, and power and water used in irrigation. (*e*) Production Costs.—Depreciation of machinery and implements (Agricultural, 10 per cent, pastoral and dairying, 5 per cent.) and maintenance of buildings and fences (4 per cent. on estimated present value of buildings, etc., used for farm or station purposes, excluding residences). (*f*) Net value is local value less production costs. (*g*) Local value is also accepted as net. (*h*) Gross value is also accepted as local and net. (*i*) Not available for previous years. (*j*) Power, fuel, explosives, timber, etc.
